For Control of: Ants, Cockroaches, Firebrats, Silverfish, Spiders, Mites, Bed Bugs, Lice, Fleas, Ticks, Stored Product/Pantry/Fabric/Clothes Beetles and Moths & Drywood Termites

Kills Bed Bug Adults & Nymphs
Kills Bed Bug Nymphs Hatched from Dusted Eggs
Kills Pyrethroid-Resistant Bed Bugs
Lasts Up to Ten Years When Undisturbed
Provides Fast Control
Odorless • Non-Staining

DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Use Restrictions: In edible product areas of food handling establishments, restaurants or other areas where food is commercially prepared or processed, or in serving areas when food is exposed, this product may only be applied as a crack and crevice treatment. Any product remaining outside of cracks and crevices must be cleaned up and removed.

Application Directions
Use Sites: In and around residential, multi-family, commercial, industrial, institutional, municipal, agricultural, research, daycare, health care, educational, recreational, and office buildings, hotels, motels, garages, transport vehicles, warehouses, theaters, and other manned structures, and food handling and food processing establishments.

General Information: CimeXa™ is a desiccant dust that has no odor and will not stain. When pests contact CimeXa™, the product clings to their exoskeleton and absorbs the waxy coating, causing death from dehydration.

Application Rates and Methods: Apply at a rate of 2 ounces per 100 square feet. In attics and crawlspaces, apply at a rate of 1 lb per 1000 square feet. Use a handheld duster, bulb or puff duster. Bottle type dusters are not recommended as the dust cloud created by these devices is not effective in reaching all areas that need treatment. When using a power duster, use the appropriate amount of foam, soap, or oil to enhance the effectiveness of the dust. Avoid application of the product directly into electrical boxes or other inappropriate areas.

Application tips for certain use sites follow:
1. In attics, be sure to get dust near the eaves and vents where insects often first enter, as well as around any pipes or potential access points between the attic and the main structure.
2. When treating cabinetary areas, if there is no gap between the cabinet panels, then small holes can be drilled to access the voids. When using any power duster, it is important to adjust to avoid dusting areas that are not infested with insects.
3. When removing items from attics or other areas, such as ceiling fans or lights, make sure to clean the dust from these areas before replacing them.
4. Electrical switch plate covers can be removed to allow access to voids, but dust shouldn’t be applied directly in electrical boxes.
5. If there are cracks between baseboards, cabinets, doorframes, hinges, counters or trim, and walls, these cracks can be lightly dusted with product. If practical, these areas can be sealed once insect problems have been eliminated, to help prevent future problems.
6. Insects need moisture, so kitchen and bathroom areas and areas immediately surrounding them, and any other damp areas should be carefully inspected and treated if necessary.

Bed Bug Treatment: Remove bedding and take the bed apart. Treat the interior framework, joints and cracks in the frame. Treat the mattress and box spring, paying particular attention to tufts, folds and edges, and the interior framework of the box spring. Remove wall-mounted headboards and cracks in the bed frame. Treat the mattress and box spring, paying particular attention to tufts, folds and edges.

Bed Bug Treatment:

6. Insects need moisture, so kitchen and bath areas and any areas immediately surrounding them, to help prevent future problems.

Drywood Termites:

For existing infestations of drywood termites, use a drill or probe to locate and access galleries and inject product directly into galleries. An electric or pneumatic duster which produces a pressure of at least 30 psi and no more than 175 psi should be used to force dust throughout galleries. Any holes left in framing covering must be closed and sealed.

Food Processing and Handling Establishment Application, including Federally-Inspected Meat and Poultry Plants:
In food areas, only apply dust in cracks, crevices, and other inaccessible areas. Avoid contamination of food and feedstuffs. Avoid introducing the product into the air. Never apply powder directly to a surface where food is stored, prepared or served. Any dust that is left visible after treatment should be removed and the exposed surface washed. Food areas include: processing areas, including enclosed systems such as syrup and oil plants, dairies, and mills; packing areas, including bottling, canning, wrapping and boxing; receiving areas; storage areas, including edible waste storage; and serving areas, such as dining rooms. In these areas, dust sparingly into cracks and crevices, such as along baseboards and between construction elements. Do not apply in serving areas when facility is in operation or when food is exposed. Do not treat surfaces likely to be contacted by food.

Storage and Disposal:

Do not contaminate water, food or feed by storage or disposal.

Storage: Store in a dry place. Do not allow food or animals to gain access.

Disposal: Do not dispose of in areas where children or animals may gain access. Do not use in or near areas where food is grown, processed, or prepared.

First Aid:

If in Eyes: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first five minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice.

Precautionary Statements:

Hazard to Humans and Domestic Animals: CAUTION: Causes moderate eye irritation. Avoid contact with eyes or clothing. Wash thoroughly with soap and warm water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet.
